Spill Cleanup

Whether you are in a crisis response mode or simply need equipment on standby when moving dry or wet substances; the Dr Hook Spill Response units have the equipment to provide an efficient and cost-effective solution that will meet your needs.

Our Fleet includes two well equipped Spill Response Trucks and two Spill Trailers as well as a Portable Vacuum Unit that can be used to recover a variety of Environmental Spills in hard to get to locations or "Off Road".

Our Portable Vac System can be used for all types of spill recovery, liquids (regardless of viscosity), powders, or small solid particulates, it is an Excellent tool for Skimming contaminated wet lands, creeks, rivers or ponds as well as providing a cost effective standby solution in case of Emergency or Facility maintenance.

Spills occur in a multitude of locations; site access with large Vac Trucks is not always possible. Our Portable Vac System can be transported easily with our off road vehicles to remote locations or flown in by Helicopter.

Spill Management

Spills of Hazardous or Toxic materials are a serious risk for Workers, the Public, Facilities, and Equipment. Environmental damage to surface elements and water systems are beyond comprehension. Having our Team and equipment on-site ready for prompt action is a value added insurance policy when high risk is attached to Hazardous Material shipping and handling. The damage to the Environment can be dramatically reduced through rapid recovery.
